*Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to an isolated nucleic acid, an expression cassette comprising said nucleic acid, a host cell and transgenic plant comprising said cassette, a transgenic seed of said plant, and a method of modulating the level of a nitrate-responsive root transcription factor, classified in class 800, subclass 278, for example.
- II. Claim 10, drawn to an isolated protein, classified in class 530, subclass 350, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and modes of operation. The isolated nucleic acid and method of modulation of a transcription factor of Group I, and the isolated protein of Group II, do not require each other. Further, the nucleic acid and amino acid sequences of both groups can be made by alternative means, such as chemical synthesis.

Because these inventions are distinct for the reasons given above, and the search required for Group I is not required for Group II, and the inventions have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 1638

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
